

CERTIKIN ON-SITE LINING MATERIAL

Certikin On-Site Lining Material

New for 2009, Certikin are pleased to introduce on-site lining to our range. Certikin are able to offer a wide range of patterns and colours which will make any pool look spectacular. Suitable for both domestic and commercial installations, our on-site lining products are tough and durable and are specifically designed to improve a pools performance for many years.

Manufactured within rigidly controlled quality processes and in strict accordance with international standards, the AGAM series of PVC sheeting offers an extensive and reliable range of options for lining your pool. The material is tested at source and meets all the required standards for; tensile strength; resistance to delamination; tear strength; shear strength; peel resistance when welded; water absorption, elongation, dimensional stability and resistance to chemicals and staining.

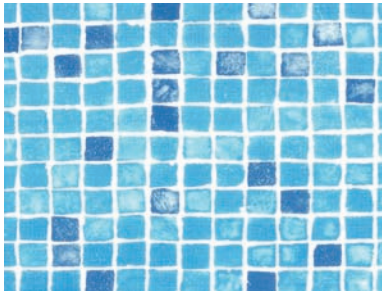

Available in a range of traditional and modern patterns and in plain and anti-slip finishes with colour co-ordinated liquid PVC to seal the welded seams, AGAM PVC is produced to a 1.5mm thickness and includes a re-enforced polyester mesh to offer strength with flexibility. The PVC can be applied to almost any existing pool finish, either directly or, preferably, over a geo-textile underlay which will further enhance the feel of the PVC and assist it in reducing thermal conduction

Product Features

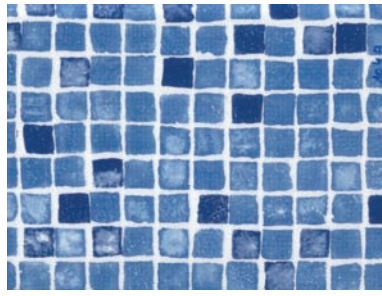

- 10 year pro-rata guarantee with pool temps up to 90degF (32degC)
- Ideal for both new and refurbished pools (including concrete, cement render, steel, aluminium, timber and fibreglass)
- 1.5mm thick PVC with polyester internal mesh
- Anti-slip PVC for steps and walk in slopes
- UV Stabilised – tested in acceleration chamber
- 50mm overlapped welded seam – sealed with colour co-ordinated liquid PVC
- Anchor points made with stainless steel expanding drive rivets
- Geo-textile underlay available
- Renovates old surface
- Easily repairable if damaged
- Suitable for domestic and commercial applications
