## REEL SYSTEMS

### FEATURES

- Choice of end bracket designs
- Floor, wall or balustrade models available
- Heavy duty re-inforced barrels
- Simple slide on strap connecting system

*Depending upon your pool location, a solar blanket or heat retention cover is absolutely essential, but placing this onto the water and removing it from the pool can be difficult and time consuming.*

*Certikin manufactures a wide range of commercial and domestic reel systems which enable the cover to be removed from the pool in a matter of minutes. Each of our range are supplied complete and include a bracket style of your choice, extended telescopic aluminium barrel, simple cover connecting straps and a heavy duty white winding wheel.*

*Depending upon the size of your pool, there are two sizes from which to choose; the small unit is suitable for pools with a width up to 15' (approximately 4.5 metres) and for larger pools up to 20' (approximately 6 metres).*

## REEL SYSTEMS

### The Atlas Range

The Atlas is a range of domestic reels to suit all requirements. Whichever model you choose - be it the mobile version or the fixed version (which should be fitted permanently at the edge of the pool or wall mounted) - they are all made from highly polished 316 stainless steel.

The Atlas range also includes a specially designed 3" (75mm) anodised aluminium barrel, supplied as a telescopic style unit. The barrel includes a unique groove which not only provides additional strength but allows easy connection of the cover straps without the necessity to drill. All models are available in two sizes to suit smaller pools up to 15' (4.5m) or larger pools up to 20' (6m) wide.

### Certikin's unique heavy duty barrel system

Note the extra strength in all Certikin aluminium barrels. Each barrel is supplied in telescopic format, allowing a minimum of 2'(600mm) overlap between sections. Because the unit is of a single span there may be some minor sagging in the centre, particularly with wider or longer covers, but the additional overlap will keep this to an absolute minimum and will not affect the winding mechanism.

### Castors

A choice of castors for mobile models are available from Certikin

If you should require further technical information please do not hesitate to contact us.

### The FeherGuard

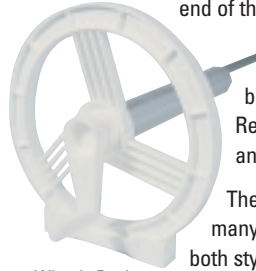

Certikin are sole UK distributors for the FeherGuard range of reel systems. FeherGuard are based in Canada and have been making solar blanket reel systems for 25 years.

Blanket Handler

The Wheels Reel System features large 20" (51cm) wheels which easily roll over any surface. These specially designed wheels make moving the reel system away from the pool effortless. Each end of the Wheels Reel is fitted with a handle so winding of the blanket can be done from either side.

Wheels Reel

The unit includes a three part telescopic barrel and cover connecting straps. Recommended for most solar cover applications and up to 18' (5.5m) wide.

The Blanket Handler plus system is designed with many convenient features and is constructed with both style and durability in mind. Use the Blanket Handler for all in-ground pools or on above ground pools where decking has been installed. Available with FeherGuards unique rib locking aluminium barrel and for pools up to 18' (5.5m) wide.

### The Clifton

The Clifton range is principally designed for light commercial applications but is also an ideal reel system for larger domestic pools.

Available as a single roller (for maximum pool dimension of 7.5m x 15m) or twin roller (maximum pool dimension of 15m x 25m), the Clifton can be operated as a manual system or have the benefits of a 3:1 reducing slip gear system to make operation easier.

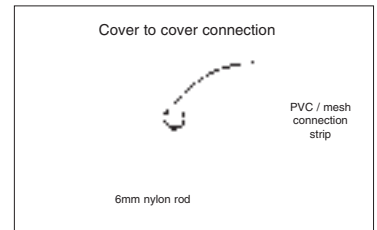

All Certikin floating covers can be comfortably fitted to the Clifton, either in factory at the point of order or retrospectively, and the Certikin Aquablade towing system is the ideal accompaniment to ensure ease of use.

Whilst all single models should be secured to the pool surround, twin models are complete with heavy duty lockable castors.

All Clifton brackets are manufactured from 316 grade stainless steel and the tubing section is a one-piece 127mm (5") diameter aluminium tube, profiled for extra strength.

Cover connection is by means of a 6mm nylon rod fed through the back edge of the cover (or its connection piece) to ensure a secure, square attachment to the roller tube.

Please see the main Certikin price list for further technical details on our reel systems.
