

Certivac Vacuum Head

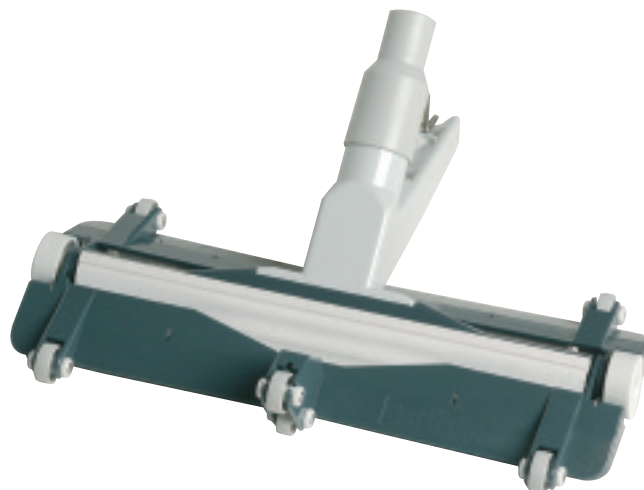

Certivac Vacuum Head

The new Certivac is of extremely robust construction and is the most efficient pool head in its class.

Designed for use in pools with a 0.5HP or larger pump, it is suitable for use with any type of pool finish, whether concrete, fibreglass or liner.

Its articulated head means that the Certivac will clean both pool floor and walls without any need for adjustment. The wheels are set slightly in from the edges of the unit to maximise efficiency and make cleaning into the corners easier than ever before.

A centrally mounted brush means that even solid debris can enter the suction stream directly.
